The following is an examiner's statement of reasons for allowance: the prior art fails to teach or suggest a method for finishing a surface of a protective package on a microelectronic device, comprising:

molding a protective casing around at least a portion of a die to form a package having a molded surface;

before marking the molded surface, chemically etching at least a portion of the molded surface of the package to remove a layer of material from the package and form a marking surface;

cleaning residual materials and/or chemical from the package after terminating the etching of the package surface; and

marking the marking surface after cleaning residual materials and/or chemicals from the package, as in the context of claim 22.

The closest prior art, Kye, Levit and Blair, teaches a method with etching and cleaning. However, applicant's point is well taken that there is no suggestion to modify Kye to etch the die prior to marking the molded surface because this would add the costs and process time of another etch step to Kye's method without any apparent benefit provided by the prior art. The prior art does not suggest the combination of steps of first molding, then etching, then cleaning and then marking, as in the context of claim 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
